

## VCM-CF Series Voice Storage Length Formula

### 1.) 8 Bits

CF CARD capacity × 1024KB / sampling Rate = ??? sec.

EX : CF CARD 256 MB applies 44.1 KHZ, 8 Bits

$$\boxed{256} \times 1024 \text{ KB} / \boxed{44.1} \text{ K} = 5944 \text{ sec.}$$

### 2.) 16 Bits

CF CARD capacity × 1024KB / sampling Rate = ??? sec. (8Bits) / 2  
= ??? sec. (16Bits)

EX : CF CARD 256MB applies 44.1 KHZ, 16Bits

$$\boxed{256} \times 1024 \text{ KB} / \boxed{44.1} \text{ K} = 5944 \text{ sec. (8Bits) / 2} = 2972 \text{ sec. (16Bits)}$$

\*\* The voice length above needs to deduct the memory space taken by the header of CF- CARD firstly. \*\*

\*\* The number in this box  means different CF CARD capacities & sampling rates. They decide the length of a voice.\*\*
